

Ronald G. Wayne, poet/writer and friend, has published his memoir, *Adventures of an Apple Founder*. We have all heard of Apple Computer and founders, Steve Jobs and Steve Wozniak. But, have you heard of Ron Wayne? He is perhaps the most secret Apple founder, its third. We at Tumbleweed Tales Society have come to know Ron as a fascinating intellect who brings creations of “Intricate Rhymes,” witty anecdotes, beautifully poised “thinktocracy” to our monthly round table poetry gatherings. But, over time, we have learned that he is a man who had accomplished an incredible journey — the one that has helped bring about a technocratic revolution of our age, or should we say *evolution*. Ron is definitely a man with a past, but more so, he is a man pointed squarely to the future. *His story is shall we say history* for he is a gentleman who has lived unique adventures in technical engineering and entrepreneurial experience and the daring of inventiveness.

“I certainly cannot claim that all my decisions were right, . . . yet, it is the composite of all those decisions that has placed me in the very real circumstances of the ‘here and now.’ . . . I am comforted . . . that I’ve made every effort during my lifetime to follow at least one tenant . . . ‘Do no harm.’ And if the fates are kind, . . . there may well be more thrilling adventures yet to come, before that last bell tolls.”

--- Ron Wayne

Excerpt from Forward:

“ . . . Ron ended up playing a huge role in the early days at Apple before we had funding, before we’d done much of anything. He left for personal reasons, and we were sad to see him go, but we understood. He really was our third partner. . . .”

--- Steve Wozniak
